SECTION V – HEALTH HAZARD DATA

Primary Routes of Entry:
Acute Effects of Overexposure:

Acute effects from overexposure may result from ingestion. There is no human specific data available for these products. The acute oral toxicity of these products, as packaged, ranges from an LD-50 of about 700 mg/kg for some avian species to an LD-50 of about 6,500 mg/kg for white rats. Laboratory animals, when administered toxic doses of the formulation exhibited evidence of nervous system effects such as loss of motor control, un-coordination, anxiety, tremors, and involuntary convulsions followed, in some cases by death.

Chronic Effects From Overexposure: There are no known chronic effects of overexposure to these products. However, persons handling large quantities of these products who are allergic to grain and grain dust should anticipate similar allergic reactions.

Medical Conditions Which Might Be Aggravated by Exposure: Other than grain allergies, none presently known.

Carcinogenicity: NPT: No IRAC: No OSHA: No
